A quick, brush-free oral spray for dogs powered by scientifically supported Xpersiv™ technology to help reduce plaque formation, support healthy gums, and promote fresher breath, making daily dental hygiene easy and practical for pets and owners on the go.

Plaqtiv+ oral care

WITH XPERSIV™

ORAL SPRAY FOR DOGS

STRESS-FREE DAILY ORAL CARE WITHOUT BRUSHING

Spray. Done. Clean mouth.

Scientifically supported • Vet recommended

Dental plaque builds up naturally in your pet's mouth every day. Without regular care, it may contribute to tartar formation, gum sensitivity, and bad breath over time. Not every pet tolerates brushing, and not every situation allows for a full dental routine.

Plaqtiv+® Oral Spray is a practical oral care solution that offers a simple, hands-off alternative for daily plaque control. A quick spray on each side of the mouth is all it takes — no brushing, no rinsing, no fuss.

Powered by scientifically supported Xpersiv™ technology, it helps reduce plaque formation while supporting healthy gums and promoting fresher breath as part of a consistent daily routine.

Suitable for dogs of all sizes, it is particularly practical for pets not used to handling or brushing, and for owners looking for a stress-free dental solution for puppies.

DAILY ORAL CARE MADE EFFORTLESS

"Spray & go" application system
Simple mist application on each side of the mouth-no brushing required.

Daily oral plaque & tartar care
Xpersiv™ technology helps reduce plaque formation as part of a daily oral care routine.

Passive plaque control
Works without mechanical brushing — ideal when brushing is not possible.

Stress-free dental care
Reduces handling stress for pets that dislike toothbrushes or oral contact.

Fresh breath maintenance
Helps control odor-causing bacteria through consistent daily use.

Ideal for sensitive pets & puppies
Perfect entry point into oral care for young or brushing-resistant dogs.

Plaqtiv+ oral care WITH XPERSIV™

NEXT-GENERATION PLAQUE CONTROL

With its patented **XPERSIV™** technology

BEFORE

Without oral care, plaque biofilm and calcified calculus form

AFTER

STEP 1

Xpersiv™ binds minerals, making them unavailable to form calculus

STEP 2

Without minerals, maturation of the biofilm is impaired

STEP 3

Weakened calculus softens and begins to break off

Plaqtiv+ uses patented Xpersiv™ technology to bind the minerals responsible for tartar formation, helping prevent biofilm maturation and calculus build-up.

Without oral care, plaque quickly mineralises into hard tartar. By capturing these minerals, Xpersiv™ disrupts this process, weakening the biofilm and softening existing calculus so it can break away more easily.

This helps improve the effectiveness of daily oral care products such as chews, wipes and toothpastes.

QUICK, HANDS-OFF SOLUTION FOR DAILY ROUTINE

Easy to carry and use on the go

1. Gently lift your dog's lip
2. Spray each side of the mouth, covering teeth and gums
3. Done — no rinsing required

✓ Can be used daily

SUITABLE FOR ALL DOG SIZES, BREEDS AND AGES

- ✓ Ideal for puppies and dogs resistant to brushing
- ✓ Perfect for pets new to oral care routines
